Thanks, Sandeep. I did have only the three marginal comments; miscellaneous textual revisions should show in red-line when track changes is enabled. The edits are primarily technical, for the sake of polishing.

On the question of an "environmental protection easement," I have proposed revisions to Section 5.1.3. to clarify the status of ICs on the property. The discussion is corrected to note that an EPE is an acceptable or alternative IC, but that Vogel has not prepared one in place of or in addition to the state registry listing. Please note that I am also proposing deletion of the second row in Table 2-1, which incorrectly listed an EPE as a "planned and/or implemented" IC. Per our discussion this afternoon, I chose not to address IDNR's recent request for an environmental covenant because that request is, at this time, not mandatory under the decision documents.

I also did not propose any textual additions concerning the groundwater point of compliance. Let's keep this issue in mind, however, and potentially discuss it with headquarters when their comments are received. It's not clear to me whether the issue is appropriate for inclusion in a FYR as a matter of short- or long-term protectiveness.

Sorry:

When we started the FYR, the work plans were still being reviewed and not finalized. I am not sure how to keep up with changing its status as we take our time to complete this FYR.

Did you only have three comments, correct?

I did not see any edits or such?

Very Respectfully,

Jared:

Thanks for the comments.

1. Take a look at the appendix in the pdf file that I shared. It shows the EC being filed. If that answers your question, then modify your comments related to this issue.
2. Not sure about the point of compliance and ROD amendment. Typically FYR looks at remedy performance and such. The other question is how those negotiations will go with IDNR and PRP. So we will see.

Very Respectfully,

Sandeep:

I've finished reviewing the Fifth Five-Year Review Report. I made a handful of editorial corrections in the document, as well as provided comments on a couple issues. Primarily, we may need clarification on the status of the "environmental protection easement" that's required by the 2000 ESD. The report reads as though one was filed, but only the deed notice was completed in 2014.

One issue that I did not note in the document but want to raise with you is the point-of-compliance for groundwater. As we've learned through consultation with headquarters, this will eventually need to be addressed through an updated decision document prior to NPL deletion. Perhaps this kind of administrative concern is not ordinarily addressed in a FYR, but, in case it is, I wanted to bring it forward for discussion so we don't miss the opportunity.

Thanks,  
Jared
